

Max Hansmann studied chemistry at the University of Heidelberg with research stays at Cambridge University and the University of Texas at Austin. He finished his master's thesis in 2012 in the group of Barry M. Trost, followed by a PhD (2012-2015) with Stephen Hashmi and a Postdoc (2015-2017) with Guy Bertrand. In 2018, he started his independent career at the University of Göttingen. Since 2019, Max Hansmann is a junior professor (tenure-track) at TU Dortmund University. His research interest include organic redox systems, photo catalysis, energy storage as well as reactive intermediates. He is member of the Emmy Noether program and recently received an ERC starting grant.
